

Strategies in place at The Holistic Practice to Address the COVID - 19

During Open Clinic Hours:

Advanced 3-Stage Filtration System: Designed in California. The Pre-Filter, True HEPA Filter, and High-Efficiency Activated Carbon Filter capture allergens, pet hair, dander, smoke, mold, odor and large dust particles, in addition to removing 99.97% of airborne contaminants as small as 0.3 microns.

The first of its kind to combine the most effective technologies into one product with 6 powerful stages of purification. Exceptionally quiet, it features the latest in smart technology including an air quality sensor, reactive purification, and app control. Third-party lab tested to reduce up to 99.99% of H1N1 Influenza virus, MERS Coronavirus, bacteria, mold, mycotoxins, and VOCs.

Frequent and repetitive surface cleaning and consistent use of medical grade wipes, natural hand sanitizer, and diffusion of essential oils (immune boosting and antiviral/antibacterial).

During Closed Clinic Hours:

Ozone generation - replicates what nature does. Drawing in the ambient air, pass it over highly charged plates, and transform the regular 2-molecule oxygen into 3-molecule oxygen. Quickly oxidizing and destroy the offensive organic molecules, completely and permanently eliminating odours, killing bacteria and viruses, and dramatically reducing mold and milder spores.
